The Amino Acids and Ascorbic Acid in Prevention of Cancer-A Vedic Perspective

R. Ramachandran — Research Scholar, Utkal University of Culture, Bhubaneswar-751009, Odisha

Dr. Mangala Prasad Mohanty — Honorary Secretary, Indian Red Cross Society, Odisha State Branch, Red Cross Bhawan, Bhubaneswar – 751022

KEYWORDS :

Introduction:

The present study indicates that Vedas were created some 25,000 years ago, but this also we can assume and cannot establish the date, May be more than 50,000 years too.

An ice cube might have fallen on the South Pole, which created a sea, the ocean, and swallowed 2/3 of the Earth. This might have happened by 10,000/ 15000 years ago. People moved towards the mountains, the center of the globe and restarted the work. The continents are North America, South America, Asia, Australia, Europe, Africa and Antarctica.

The present study establishes that Vedas were re-written by rishis from BCE 10,000. This Starts with Zorathustrian period BCE 10,000- 8,000 in which period avarice / creed penetrated into the minds of humanity. Everyone wanted to earn money, and money started ruling the people. The so called civilized people formed several groups and each group wanted to overpower others and loot money they earned. This period some seers or rishis worked for others without any selfishness, who justified only if the people live with health, they can pay taxes and fight in the wars, and the wounded warriors should be saved for taking part in the next war. These rishis were most respected and honored by the king. This was started in Persia.

Even at that time the rishis were living in the western mountains of India, who were running schools for curing diseases. Some historians and scholars quote that Dasaratha visited these places to pick few herbal for conducting Puthra Kaameshti Yaga, for getting a child. Some points out Zorathustra visited these areas as he wanted to reach the South Pole.

This Zorathushtra supported Ayurveda and philosophy, encouraged the Veda Schools, and paid his full attention in the health of the human. This is quoted in Zend Avesta. This Zend Avesta is a sacred book of Persia. This was published in 1880 by Max Muller[1].

When human generated from Earth, he might be selfish like an animal and when he started thinking and asked questions to clarify many doubts to come out the problems he faced, the philosophy born. When the philosophy brought answers without any expectations like money, favors, etc, it was named as Vedantham, Veda+ Antham= Vedantham, meaning Depth of knowledge. The answers on Vedantham were listed as the Vedas. Later days the people themselves divided in many religious groups like Christians and Muslims, many sub sects also created under a head, which the innocent people accepted them as Gurus and obeyed their command and this time the ancient human culture branded as Hindu Culture!

The health point of view, the social science comes under Hindu Culture, for which the present day scholars, physicians fail to understand. First of all, this should be identified as human culture and not Hindu culture, as this is based on human and not on a religion.

Since millions of years ago, the human lived on the Earth. There is no particular period like Stone Age etc. We cannot assume that human was created million years ago etc, as we feel that it is beyond our imagination. We can assume, but cannot pinpoint the exact date of the birth of a human; here it is the human who thinks (A human with knowledge). In the entire human, there were some extraordinary men, who thought beyond a certain level, had mind power to travel in the space, to find answers to certain problems. These rishis offered five kinds of purification such as Body, soul/mind, food, speech and self control that resulted in five kinds of powers such as will power, absorbing power, selection of words, creative and protective power that gave them selfish less, cared for another human, worked and served for others without expecting any favors.

They arrived at a solution, discussed the result, shared their findings with other likeminded people, exchanged their views, and arrived at a point to start with to counter the problems. These people were identified as seers.

These texts they scribed are called *Vedas* meaning Knowledge.

Rig Veda has two lines, where the seers will quote by chanting. *Yajur Veda* will edit and rectify the mistakes and apply. *Sama Veda* will apply the pronunciations, and advise how the words should be spelt. *Atharva Veda* will guide the name of the herbal and how that should be used, and precautions to be followed.

For curing diseases the seers recommended putting flowers such as lotus, glowing of lamp with herbal oils, herbal leaves, and fibers in the bath and lying on grass mats. (Pancha Neeranjanam).Since these seers inaugurated our human life in the Earth we live comfortably. The life of humanity depends on his health. The ancient sages quoted "The disease free life is worth having millions of dollars". You may be having lots and lots of money. But if you have diseases you will not hesitate to spend the entire money to get relief so that the pain is relieved soon. The methods of curing the diseases were taught in many schools headed by risis/ Sages, who devoted their entire life for the betterment of the common man. They analyzed the quality of the herbal and its' chemical content, analyzed the chemistry of diseases, and countered that with the herbal. All this was done when men resided in South and North Poles.

This scholar who found that Vedas a text written millions of years ago is only for the welfare of the people, to cure diseases, and it is not black magic as many thinks, that will cure any kind of diseases overnight, bring victory without a fight, bring wealth overnight without ability and skill. This discovery encouraged this scholar to share his findings with Medical professionals, and enrolled for PhD with Utkal University of Culture, Bhubaneswar, Odisha, India.

The topic selected

"Vedas – A New Critical Analysis with Special reference to Human Body and Health"

Research was carried out under Culture Studies, since the study is related to social science which is quoted as Indian Culture, the method of living or the art of living. On those days the learned scholars advised certain restrictions in day to day life that lead the people for a disease free living. Since they were not aware of the science behind it, they branded the method as culture.

Ayurveda and Occult Chemistry:

Ayurveda and herbal are based on Occult Chemistry, which one cannot see and register. But Madam Annie Besant and Leadbeater investigated this Occult Chemistry, based on "*Pathanjali's Yoga Sutra*"[2]. The research began in August 1895 and was going on till the death of Annie Besant, say for 40 years. She took the guide from India, a sage who sent

his mind and concentrated on universe and dictated which she had written. This she quotes in the book itself[3].

Amino Group:
Amino group is an important reactive group in proteins.($-NH_2$) and attractive towards alkalis in proteins, it can make big changes in the qualities/ chain of protein when combine with alkalis particularly at pH 8 HCHO in bile.

There are two types of Amino Groups of protein

Alpha Amino Group of the Terminal Amino Acid of the Protein Chain

Epsilon Amino Group of the Lysine Side Chain

Amino Acids:
The Amino Acid, when identified in CE 1806 was named as ***asparagines.*** (asclepias Acid[4] Ananta drank at ceremonies[5]) meaning: the root of which supplies valuable Medicine. According to Ayurveda, it is based on *Pitha*. Amino Acid produces proteins which are possible with herbal juices. There are various kinds Amino Acids and each kind of Amino Acid is activated each part of the body.

Amino Acids in curing Diseases:
According to Chemistry of Ayurveda, the herbal cure, the reaction starts in the Liver, where the juices/ essence of the herbal (bile) mix with blood. Amino acids do occur in nature particularly in peptide antibiotics. Amino acids will regulate the protein metabolism. There is a general view that amino acids cannot be absorbed by the skin[6]. This is not true. If a correct combination of chemicals employed, we can make the human skin absorb the amino acids with other particles[7]. The globular Proteins of the skin are soluble in dilute salt solutions and coagulated by heat. By dissolving these globular proteins of blood plasma the necessary chemicals can be mixed with blood without injecting in by IV or IM.

Amino Acids activate the proteins through keratins. There are two types of Keratins namely soft and hard. Soft keratins are less condensed like outer layer of epidermis. The hard keratins are found in hair, nail, etc. There is numerous composition of amino acid of various types in keratins[8]. All the keratins has large amounts of the hydroxyl amino acids, serine and threonine Hydroxylysine an amino acid found in collagen can sometimes present in the hair too.

There are 21 varieties of amino acids present in the human skin. The amino acid present in the chest has a name, on the right wrist it has a different name. These amino acids spread throughout our body on different location, has a name. The hair on our eyelids, eyebrows does create an amino acid that will help our vision. Similarly, the hair on the chest will activate the functioning of our heart and lungs. The amino acids created by the hair on our abdomen and manhood, will help our sperm count in the semen. This we can find in *Dhathathreya Kavasa* in the form of *sloka* that mentions about the parts of human body parts and blood cells.

The Skin and Ascorbic Acid
Mineral Constituents of human skin[9]:

Minerals	**Mg.(%)**
Potassium	322-558
Sodium	122-247
Calcium	15-65
Magnesium	18-34
Phosphorus	351
Copper	0.56
Zinc	2.4
Iron	1.0
Arsenic	26

When healing a wound the glycogen plays a vital role. Once the wound is healed the Production of Glycogen is stopped or suspended. In the skin, there are few vitamins, Biotin (B) /(H)., this is monocarboxylic acid, slightly soluble in water. Inositol, also known as muscle sugar is known for its prevention of fats and cholesterol in skin tissue. The major portion of the Phosphorus is present in epidermis layer. It occurs in tissue as Phosphate ion. Iron is derived from Hb., and from nuclei and chromatin of cells and hair. Copper is based on pigments on skin[10]. Calcium and Magnesium are found in the basal layer of the epidermal system.

Some time due to ill health the body may need more minerals that can be sent through amino acids. These minerals can be sent in to the body through the skin so that the mineral is absorbed into the body and combines with blood cells so that the patient gets quick relief.

All living beings are the product of Nature. The electromagnetic forces / vibrations that reach Earth from other planets create heat and activate the Earth. The vibrations that other planets create are the reason for environments and seasons. The change in season is responsible for the growth of all living beings. The environment that creates vibrations sends minerals and chemicals into the human body through the skin, create vibrations with chemicals/ minerals, combine with fat glands below the epidermis, reacts and reaches liver which is identified as Ascorbic Acids. From 1937 to 1967 many scientists were awarded the Nobel Prize for analyzing this Ascorbic Acid. In 1937 for designing the structure of Ascorbic Acid the Nobel Prize was shared between Norman Haworth and Paul Karrer and the same year Nobel Prize for Physiology and Medicine went to Mr.Albert Szent-Gyorgyi for finding the biological function of Ascorbic Acid. In 1967 Linus Carl Pauling recommended this Ascorbic Acid for cold and cancer. But no one guided the right method how this Ascorbic Acid can be consumed by a patient.

Light Rays and Antioxidant Mechanism:.
Hydrogen and oxygen will not react with each other in a vacuum. They need some reactor/ emulsifier, which is atmosphere. Without all vibrations and wind, water cannot form only by combining in a beaker.

When light rays pass through metal contain H+O Ascorbic Acid converts this H + into = H_2O

When the Ascorbic Acid from plants (Glucose) reacts with Sodium, Potassium and calcium in the human skin on heat penetrates through the corn, enters the liver and reacts with bile like Amino Acids.

Ascorbic acid can transfer a single electron, owing to the stability of its own radical ion / semi dehydro ascorbate. Thus the reaction is:

$RO\cdot + C_6H_7O\text{-}6 \rightarrow ROH + C_6H_6O\cdot 6$

The Sun Plants/ Lilly plants, that contain certain medicinal properties when put in a copper Vessel, and Light rays created by herbal oil lamps or Sun Rays, and the concentration electrons occurs and this prevents tissue damage due to stress or fear or anxiety.

Ascorbic Acid is recommended for the following:-

Ascorbic acid is used to cure *Chediak-Higashi syndrome, which* is a rare nervous disorder and creates white cell to fight infections. Ascorbic acid facilitates mobility of white cells in blood. Ascorbic acid is given to patients to heal the wounds by the Surgeons.

In post operative cases Ascorbic acid is reduced due to stress is compensated by administrating through IV.

Ascorbic acid resists the massive and violent growth of tumor that eats away the iron and white cells in the blood. It forms a net and arrests the tumor growth**.** When powerful electrons wrap around a magnetic field, (here the minerals in the blood of the Human such as Iron,) they spiral around it rather than sucking and penetrating directly like a bullet. The whirl agitation is continuously changing the direction of the electron; it is in effect accelerating, and emitting radiation. The frequency of the emission is directly related to how fast the agitation is moving. This can be related to the initial velocity of the electron, or it can be due to the strength of the magnetic field. A stronger field creates a tighter spiral and spreading fast[11].

As the electron travels around the magnetic field, it gives up energy as it emits photons. The longer it is in the magnetic field, the more energy it loses. As a result, the electron makes a wider spiral around the magnetic field, and emits EM radiation at a longer wavelength. Here the physicians by mistake recommend strengthening and creating more minerals that the magnetic force swallows and spreading the area and the cancer spreads more vigorously. Now, instead of creating more minerals in the body or in blood, if we mask/ laminate the minerals with naturally created (In the Bile) power, which the electrons cannot touch so that the electron is inactive, unfold and break the electrons and cannot, emit any more radiation. The light is a magnetic force that can be identified in two categories, one is thermal/ the light from the Sun (Electron), Moon, Planets, Comets, Thunder lightening (Where the radiation wholly depends on the object that creates the light force/ energy) etc., a non thermal emission. When the same light passes through a metal container that filled herbal, (Molecules) and loses its original character and possess the quality of the herbal forms as a spring and uncoils the electron wrap and breaks it. This nonthermal radiation is purely depending on the external energy from the molecules from the nearby sources[12].

Radiant Energy and Cancer cure as mentioned in Vedas

The Bio medical science is a vast subject that needs to be studied in depth and length. Rig Veda I Mandala I Stanza 1 quotes:

It is a well known fact that one cu.mt of vacuum contains energy to squeeze into 10^{80} – 10^{120} GMs of matter. The chemical power of radiant energy (energy carried by electromagnetic radiation photons) has various frequencies and can be created by lamps fueled by herbal oils. This radiant energy in a single form will not heat the air, but produce heat within a human who stays in the room or on an object kept in the room.(ie), it will create heat and activate the metal in the object. The human body has minerals in the body. The radioactive isotopes are to be handled smoothly so that it benefits the human. The chemical power of radiant energy is the leading benedictory. It has the power to create clear planned processes. It creates light in the darkness and this light which is believed to come from Venus, and this light have the power to improve the health.

Rig Veda I Mandala I Stanza 2

The creative power of radiant energy creates the predecessors of mass and volume called the electromagnetic waves and the mixture of stability and instability.(Stable because they are once produced they are preserved in space and unstable because of their imperceptibility after a short duration.)

Rig Veda I Mandala I Stanza 3

The negative power of radiant of energy converts motion energy in to elementary immobile masses, maintains consent velocity and rays of light quanta. These theoretical energy quanta tend to create the power of reversible actions in the ancient mass. This means all reversible actions are due to the existence of light energy[13].

Mind Power and Amino Acids:

Here you must note one more point, this Ayurveda quotes about mind power too. The mind power can be achieved by Yoga, the concentration of mind fixs it in a place without wandering hold it as long as you can that can create Amino Acids in skin vein, that can be absorbed by the liver. There are number of Amino Acids required by the body, and the body cannot produce all the Amino Acids that the body demands, and the liver need more amino Acids that can be produced by herbals. Moreover, there are certain verities that can be produced by the skin alone, and the hair follicles of the skin play a vital role in this. The mind power creates vibrations, (Electricity), which, when combines with hydrogen in the human body, creates Amino Acids. For example, if an youth sees a woman, thinks of making love in the mind, that creates vibrations in the mind, the vibration travels to his manhood region making it erect. The same mind power can also be applied and we can change the direction of the flow of electricity in the body and push the Amino Acid, to a particular direction[14]. n electrical engineer, Mr.Thomas Henry Moray, (Date of Birth 28th Aug 1892,) has developed an equipment to extract the energy waves from the universe. But in 1930, he was threatened by the people who opposed his findings. But his son John Moray, the equipment pulled the energy from the universe.) The Earth has numerous metals and few are copper, Lithium, Lead, brass, gold, silver, iron and when these metals combine with oxygen in the atmosphere produce the following gases.

N_2	Nitrogen
O_2	Oxygen
AR	Argon
CO_2	Carbon dioxide
NE	Neon
HE	Helium
CH_4	Methane
KR	Krypton
H_2	Hydrogen
XE	Xeno
CO	Carbon Monoxides
N_2O	Nitrous oxide
SO2	Sulphur dioxide
NO	nitric oxide
NO_2	Nitrogen Di Oxide
HCHO	Formaldehyde
NH_3	Ammonia
O_3	Ozone

These gases when mixes with oxygen, which emulsifies the entire gases and sends in to our body and activates our nervous system and blood circulation.When a disorder happens in this system and if a bacteria paralysis the flowing of gases into our body one or a whole or mass result in formation of diseases, that creates uneasiness and arrests our free movements. For example, if a man drinks alcohol, that penetrates in to liver and arrests flowing of Ferrous and phosphorus that results in giddiness and unconsciousness. When he lights a cigar, the tobacco the smoke that goes into the lungs arrests the flow of Nitrogen and formaldehyde groups, that results in indigestion These consumptions of alcohol and cigar may give some satisfaction to our mind like we feel., are false. The satisfaction is imaginary and we assure ourselves that these activities and habits give us relief which is imaginary and we live in the shadows.

Same way when a bacterium that developed in the skull or brain eats away the sulfur dioxide group gas and paralysis the flow of a metal combination form, a lump is called Cancer. This cancer cell eats the rest of the metal that floats in the blood that reaches the brain, and creates a vacuum. The vacuum attracts more air from the rest of the body and like a storm the air rushes to the brain that gives a headache, giddiness and vomiting.

The petal of white lotus creates more sulfur and if this cipher is extracted and sends vibrations that will dissolve the lump and kill the virus. If we do comet assay test in the pathology lab., we will absorb more viruses the heads of which may look like buffalo, dragon, etc., and these heads are to be cut with rays that is created by burning herbals into the body, or produce NaNo rays outside and sent in to our body through the skin. The bone cancer forms due to calcium, the blood cancer happens due to Hb the breast cancer due to the resin, the skin cancer due to formaldehyde deficiency, and the kidney is due to lack of urea, calcium and nitrogen groups. So, according to this scholar, the minerals plays a major role in curing the Cancer , and this should be activated through the blood and sending this through IV is not all possible for a cancer patient. But we can mix this with bile in the liver as Prof. Kochi

did some 100 years back in Africa on Rinder pest.

For human it is recommended to send in the body through UV rays.

Experiences and

A recent study made by this researcher on a dying Cancer patient alerted him and gave a great feedback. The man in 40s was on the ventilator for 15 days, and had trouble in breathing. This scholar advised the attendee if he can place the petals of red lotus and absorbs the change and see the face of the patient. Since the doctors already lost all hopes they didn't object to place few petals of red lotus on the chest. The color of the petal changed into blue in 4 hours during which time the patient's face showed some relief and easy breathing.

The leg of the patient also swollen in the initial stages and this scholar advised the application of oil extracted from Cyprus rotundas nut grass in the swell place reduced the swelling a lot. The attendee wondered she never absorbed this kind of reduction in swelling in her life time!

Conclusion:

If we know reason and how a cancer lump forms it is easy to arrest them and cure the man with this deadly disease. This scholar suggests the uses of ointments and oils on the skin of cancer patients apart from giving oral medicines. Further the treatment given to a patient should not be repeated on other patient until a blood test comet assay is taken. For a study this scholar suggest to take few cancer cells into the slide, send rays through a nickel / copper vessel that contains oils of certain herbals, the light rays when passes through the vessel that contains oils will produce the gas and send in to the cell as a smoke or NaNo rays and destroys the cancer cell.

In Hindu philosophy the comet assay was noted as chakras, which has eight to sixteen feathers. The center of the blood cell, the atom was identified as *Bhupuram*.

When going through the manuscripts this scholar found that all the *Agni* / Sun Plants contain minerals that can be oxidized with Ascorbic Acid. Particularly seeds of Sativum Linn entertain this ascorbic acid and minerals that needs to fight with Cancer and Diabetes. Some of herbal has Ascorbic Acid for an eye; some for knee and in the Vedas it mentions "wherever the hair follicles, the light rays penetrates". ***Datta Kavasam*** mentions about Eyebrows, eyelids too, and a closer study will help us to identify the reason for Diabetes/ cancer / TB in Eye. The disease can come at any time and anywhere due shortage of mineral in blood, which has its roots in Atmosphere and diet. If a cure for disease is Vitamin D, we cannot ask the patient to sit in Sunlight, where there is no Sun (Like USA, Europe, Russia etc.)

Instead we should create the same energy with light rays created by herbal oils. Creating light rays alone will not help, and needs to be sent into the body through skin. These light rays should be split in to millions, and may need other combination of herbals. For this a suitable vessel should be selected based on environment. For Cold countries, it is copper and brass and for hot climate it is Silver. The herbals should be put into this vessel and kept near the lamp that is lilted with herbal oils. The cotton thread will suck the herbal oil, filter creates heat and rays created by this will penetrate through the vessel, and then into human body through the skin, as ascorbic acid reacts with fat glands in hair follicle reach liver form as amino acid. This amino acid will react with blood and protect the hemoglobin and fight with any kinds of diseases that is caused by blood disorder, like Cancer.

A comparison study between the minerals present in bile and its effects in blood cells that forms different kinds of cancers should be studied and this should be countered with herbals which will change the minerals in bile that will reflect in blood cells and curing diseases or minimizing the sufferings.

The Ayurveda medicines will not combine with blood directly, but it will mix with bile and enter into the blood, strengthen and cover them and will cure the diseases.

The text I quoted below is just informational and not complete, and I leave it to the researchers to form a group and ACS Research wing can do many wonders.

Now to strengthen my theory here is the news! That appeared in TIMES OF INDIA[15]

The Ayurveda quotes this only. The juice of the herbal mixes with food pipe lotion identified as Piththa that seeps through the wall of the food pipe, strengthen the wall, offers a tonic for the spleen, that will cure the shrinkage of mesenteric gland (which creates TB in Liver, that results in ear diseases) thereby assists the digestion of the food particles and resulting in bile that results in formation of blood and gives shining skin, good eye power etc.

This scholar is of the opinion that just swallowing a tablet in time, taking few spoons of syrups, administrating IV and IM alone cannot cure Cancer, Obesity, TB, Paralysis etc., but a man should also apply mind power, in the form of Yoga under the guidance of a expert, a good oil massage that the combinations of herbal oil penetrate through skin, Taking herbal bath through steam or Tub and stay in a place where the holy lamp is lit with a combination of herbal oils. This we can quote as "Supportive therapy." Or Alternate therapy.

The Cure of Diseases with Amino Acids through Light Rays and Massages is mainly for Men. For women it needs further study.

Prevention of Cancer:

Prevention of Cancer is possible if our approach on cancer cell changes. Form a group and start your research as follows. These points will open a new window for research.

Avoid staying in the A/c room for a long time.

Changing food habits, according to the session Avoid junk food that are taken for a false prestige. Avoid meat at night at night the food pipe shrinks by 25%. And it cannot digest the meat, which requires a lot of heat to burn, as it has tallow.

Avoid synthetic perfumes that the poisonous minerals penetrate through the skin enter in liver change the bile, that reflects in cancer.

Way of life, bathing etc

Not to sit in Candlelight (Articles appeared "Candle light dinners can create Cancer)

Mind pressure will increase BP that can change the flow of bile that may result in cancer.

The toilet papers that you use will be coated with a perfume that will create a change in the anus and go into the food pipe, can also create Cancer.

When you get a disease or feel uncomfortable asking yourself, what you did that day. Take a paper and write since the morning. List what are all you ate that day? How much walk you had, how many coffees/ teas you had, places you visited, persons you met, whether you were angry and shouted with someone etc and you will arrive at an answer. If you doubt about something, avoid that in the next day and see the result. A record that.

Sit in a room, lighted with herbal oil and absorb the heat through your skin. Hold your breath and let your skin breath.

The Americans are not the origin of the place. They migrated from various European countries and differ in culture. When the culture differs naturally that reflects in the way of life. Even if you have a common code of food, your gene is from Italy, Spain, France etc., and it will take minimum thousand years to cooperate with American atmosphere.

The Body, Mind and Environment are one chain and if it is affected in one way or another it affects the Liver and Lungs that are most important twin engines in the body. The environment around you is closely knit but with less minerals in the air that you breath. Oxygen is only an emulsifier, which dissolves all the minerals, takes them into the body through the lungs and the minerals in the atmosphere reached a particular part of the body to activate the nerves. When the blood needs more calcium and if it is not supplied by the atmosphere it scrapes the bone and compensate the loss. Similarly, when there is an Iron defi-

ciency the bloods take the iron from hair follicles and skin that result in loose hair and pale skin. Recent researches proved that the smoke created by lighting the candle creates cancer; you might be well aware about this, but prefer to hold the candle near your nose and eyes during prayer. Since the atmosphere is very cold the smoke travels fast and reaches your lungs. Finally, your scientists view all the diseases created by genes, etc., but only few accepts the truth that it is due to a blood disorder. The blood disorder is created by the bile, and the scientists are yet viewing and study the mineral content in the bile the chemistry behind each mineral and origin and should make a comparative study with blood. That is, you must find the equation of the minerals in bile, and counter them with the blood test. Similarly, you must take the bile from the cancer patient (Throat, Lung, Kidney etc.,) cross examine with a blood test.

Mistakes that can be solved:

The western scientists when they are half way on a project, they immediately apply for a patent. This is not acceptable.

For instance, when a scholar translated a word from Sanskrit to English he translated as Frog. But originally it was a plant (Moon Plant) He patented that word, "*Brahmana Mundaka Parani*" as *mandoogha* meaning Frog!

Secondly, another word when a sage after a long fasting when he came down from the hill he took a plant root called *Arka*. But the scholar translated as a liver of dog and patented it.

After 150 years, this scholar found that mistake! But he didn't patent the words. Research is universal; it should be encouraged and not blocked in the name of patents.

For a researcher there is no nationality. He belongs to the world of intellectuals. He helps humanity to live comfortably. He spends sleepless nights and his mind and brain is active when he is in sleep.

He should be encouraged and not scolded or blamed. If he makes a mistake, don't laugh at him. If you know the answer corrects that, and sees if he accepts. He might have something in his mind that made him to pronounce the word that you feel is mistaken. Ask him to explain. Do not interfere when he gives a lecture, but make a note and ask him at the end of the session.

Plants of the Family of Amino Acids, how it cures? Here the Vedas explain as a story

Haoma, the Indian Soma, is an intoxicating plant, the juice of which is drunk by the faithful for their own benefit and for the benefit of their gods. It comprises in it the powers of life of all the vegetable kingdom. There are two Haomas (Kankushtha)[16] : one is the yellow or golden Haoma, which is the earthly Haoma, and which, when prepared for the sacrifice, is the king of healing plants (Available from Earth) that creates Pitha which is yellow in color; the other is the white Haoma or Gaokerena, which grows up in the middle of the sea Vouru-kasha, surrounded by the ten thousand healing plants. The white Haorna is the king of healing plants. The healing plants are said to have been created ten thousand in number, in order to oppose so many diseases that had been created by Ahriman In India also, healing plants are said to have Soma for their king, and to have come down from heaven It is by the drinking of Gaokerena that men, on the day of the resurrection, will become immortal[17].(Here the White haoma is the Mind power[18]) Yellow bushyasta[19] It Should be Pushya meaning Purification with Yellow= Pitha

Daeva Apaosha[20], fight with the Diseases, But there rushes down to meet the disease which had the shape of a dark horse, black with black ears, black with a black back, black with a black tail, stamped with brands of terror. 'They meet together, hoof against hoof, O Spitama Zarathushtra! The bright and glorious essence and the Daeva Apaosha fight together Spitama Zarathushtra! for three days and three nights. And then the Daeva Apaosha proves stronger than the bright and glorious Ti^trya, he overcomes him.

'Then I, Ahura Mazda, offer up to the bright and glorious tirtha a sacrifice in which he is invoked by his own name, and I bring him the strength of ten horses, the strength of ten camels, the strength of ten bulls, the strength of ten mountains, the strength of ten rivers. Then, O Spitama Zarathustra! The bright and glorious juice goes down to the sea Vouru-Kasha in the shape of a white, beautiful horse, with golden ears and golden caparison.. 'But there rushes down to meet him the Daeva Apaosha in the shape of a dark horse, black with black ears, black with a black back, black with a black tail, stamped with brands of terror.. 'They meet together, hoof against hoof, O Spitama Zarathushtra! the bright and glorious Tirthtrya, and the Daeva Apaosha ; they fight together,O Zarathushtra ! till the time of noon. Then the bright and glorious Tii'trya proves stronger than the Daeva Apaosha, he overcomes him[21]. This is Kuru Tirtha-Solanum Jacquinii[22],

The people heard the story, instead of following this as Chemistry; they believed this as black magic. The innocence of the people was en cashed by the so called priests, who kept the people in dark. The authors pray all the persons to see the chemistry on diseases and its cures. Let them hear the words that the inner mind explains and follow. We all have the seventh sense that warns us for every wrong step that we place..

REFERENCES

Suggest the researchers to have a look at these books and form a group in studying and investigating the methods recommended in Zend. Vedas are not chanted or preserved in Persia. It was thrown away as unwanted scrap by the people and Kings of Ancient Persia as they felt it is black magic and harm the kingdom. But a section of people who knew the worthiness took that and made further research, and documented each and every word and named the text as Veda, the knowledge. The sentences that quoted about health were marked as Ayur Veda, which means that the life of human increase with the herbal cure | M.Srinivasan, Introduction to Occult Chemistry, Theosophical Society Publishing House, Chennai, 2002 pp 4-5 | One should sincerely and with lots of devotion work on this book we can unearth many things about Chemistry | of Diseases and how to counter them. You should set aside the ego, and have a broad mind to accept the truth. | Monier Wliiams, Sanskrit English Dictionary, Oxford, London 1972,P-577 |) Monier Wliiams, Sanskrit English Dictionary, Oxford, London 1972 p-25 | http://www.justanswer.com/dermatology/4yrbm-human-skin-absorb-amino-acids-lysine-glysine.html | http://www.ehow.com/how_5848953_dissolve-keratin-deposits.html | http://answers.yahoo.com/question/index?qid=20090208153516AANblBN | http://www.jbc.org/content/127/3/685.full.pdf | http://www.jbc.org/content/153/2/521.full.pdf | http://www.globusz.com/ebooks/Skin/00000049.htm |) Annie Besant, Occult Chemistry, Theosophical Publishing House, Chennai3rd Ed 2003 pp-282-283 |) When taking bath in the wooden tub with herbal powder, the above reaction takes place in the tub water the rays | from Sun penetrates in water and reaction takes place. | The above text is based on Vedas which's meaning is translated by one Mr.Lal, in 1951. | M.Srinivasan, Introduction to Occult Chemistry, Theosophical Society Publishing House, Chennai, pp 24-25 | After Liver Transplant From Youth,Greying Man Gets Black Hair | Ahmedabad: | Executive registrar of Mudra Institute of Communication and Advertising (Mica) K G K Pillai (61) has recently got a three-year extension.This,after he got a fresh lease of life when a 21-year-old youths liver was implanted in him in 2008. | The liver of the young man,who died in an accident,has miraculously reversed ageing.His hair has turned from grey to black,his wrinkles are gone and he is no longer dependent on diabetes drugs. | Four years after the transplant in Chennai,K G K,-says,"I don't just look young,I feel like reborn as a young man. He is happy his complexion has also improved thanks Dr Anand Khakhar,a transplant surgeon in Chennai who belongs to Rajkot,for the transformation. I used to take medicine for diabetes for 12 years.After the transplant,I am off drugs as my sugar levels are mysteriously under control," says K G K who takes morning walks every day. | Doctors say that the blackening of hair and renewed energy experienced by K G K can be attributed to availability of nutrition to the body as liver functions have normalized. | | Monier Wliiams, Sanskrit English Dictionary, Oxford, London 1972 p-194 | F.Maxmuller, Sacred books of the East Vol IV, Introduction, Oxford 1880 p-ixix | Rig X,,97,17 | JamesDarmesteter, Zend Avesta, Part II, Oxford, 1883 | Monier Wliiams, Sanskrit English Dictionary, Oxford, London 1972 pp-963-964; p-99 | JamesDarmesteter, Zend Avesta, Part II, Oxford, 1883 p-100 | http://moef.nic.in/divisions/iass/Rameshwara_ExeSum.pdf; Monier Williams, Sanscrit Dic 1872 p-239 |
