ABSTRACT In this article, we provide mathematical logics and conjectures to deal with some unsolved problems in India.

KEYWORDS : Mathematical logic, recent incidents in India, invisible scientific tools.

1. INTRODUCTION

In this paper, we present some logics and conjectures to solve the following unsolved problem, using the invisible scientific tools *digital circumstance, attraction field, satellite waves, current waves, cell phone tower waves, radar waves, lacer waves, microchips, nanowires, nanoparticles,* X*-ray, nano sensors, electromagnetic waves, zero-gravity field etc.* (See [3]).

Unsolved Problem. The Former Chief Minister Dr. J. Jayalalithaa, she was admitted in hospital by illness in the next few months of getting the victory (See [5]) of the next election for *Chief Minister of Tamil Nadu* being in the same position. After some days, she passed away in the same hospital. The incident is currently believed as unnatural (See [2] and [7]).

Till now, the case is an unsolved problem.

2. Conjecture

In this section, we mathematically and explicitly split the unsolved problem into several cases and, give only inference on each case.

Let χ (Z+ or Z or X or Y or any: See [6]) be the name of the security of Dr. J. Jayalalithaa in India before she was admitted in the hospital.

Case I Assume that the security χ was diminished when she was in hospital (See [10]). If she had been in the same position *Chief Minister of Tamil Nadu* at the period of that she was taking treatment in the hospital, then one can ask the following four questions:

(1) At the time of χ was diminished, was it known that there is no possibility of returning from the hospital without death? or
(2) At the time of χ was diminished, was it known that there is no possibility to continue the same position even though she can return from the hospital without death? or
(3) Has any law already been generated in India for the action *In the period of that a chief minister, having the security χ, is in a hospital for treatment, the security should be diminished*? or
(4) If the security χ is given to a person who has been admitted in hospital, then will it affect the treatment and health of the person?

Now, we shall examine the above four questions one by one.

If (1) or (2) is true (It means the answer is YES), then the following question should be analyzed:
Was she in the position *Chief Minister of Tamil Nadu* until her death in hospital?

If (3) is true, then it should be confirmed in the Law (See [4]) of India.

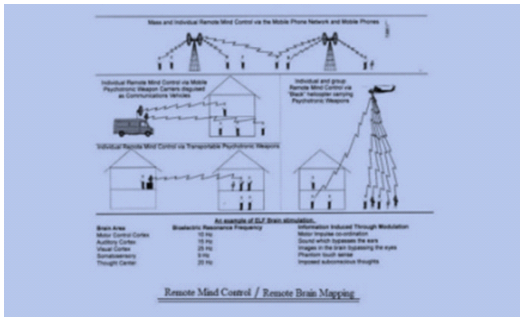
If (3) or (4) is true, then the eliminated security from χ may be security personnel and some type of tools. There are two types in tools, namely visible and invisible. In Security Circle, security using visible tools will never affect the treatment and health. Therefore, the eliminated security in hospital may be using invisible tools. So, one can ask the following question:

Question 1. Is there a method in India to protect a person using invisible scientific tools without knowing anybody?

Case II Suppose that χ was not diminished and χ was not depending on invisible scientific tools. Then, by the conjectures and related references in Srikanth-Subburam [1], we need to concentrate the following questions:

(1) It is clear that some waves cover almost all places of India. Were cell phone tower waves or satellite waves or any other waves or rays around her place illegally used? Note that the research of Human Brain Technology Interface Connection (See [8]) was started around 1924 using alpha waves (See [9]).
(2) Were there any visible or invisible tools, like nanoparticles, inside her body or the body of the persons who were nearby her place?

Question 2. Was she in the continuous check up, related to the above questions, using visible tools?



3. CONCLUSION

It is well known that continuous use of almost many invisible scientific tools will usually affect the health of a person. Moreover, there may be a possibility to misuse invisible scientific tools by illegal persons with the knowledge of concerned doctors and scientists, in several ways (See [1]).

ACKNOWLEDGEMENTS.

The first author gratefully acknowledges the TATA Realty and Infrastructure Limited for its financial support. The second author thanks the National Board of Higher Mathematics (NBHM) of Department of Atomic Energy of India for their support in his research.
