Taxation

A Study on Impact of Goods and Service Tax (GST) on Indian Economy.

Dr. Gaurav Malpani

ABSTRACT GST also known as the Goods and Services Tax is defined as the giant indirect tax structure designed to support and enhances the economic growth of a country. More than 150 countries have implemented GST so far. However, the idea of GST in India was mooted by Vajpayee government in 2000 and the constitutional amendment for the same was passed by the Lok sabha on 6th May 2015 but is yet to be ratified by the Rajya sabha. However, there is a huge hue and cry against its implementation. It would be interesting to understand why this proposed GST regime may hamper the growth and development of the country.

KEYWORDS: Goods and service tax; Indian economy

Introduction

Goods and Services Tax (GST) is an indirect tax applicable throughout India which replaced multiple cascading taxes levied by the central and state governments. It was introduced as The Constitution (One Hundred and First Amendment) Act 2017, following the passage of Constitution 122nd Amendment Bill. The GST is governed by a GST Council and its Chairman is the Finance Minister of India. Under GST, goods and services are taxed at the following rates, 0%, 5%, 12%, 18% and 28%. There is a special rate of 0.25% on rough precious and semi-precious stones and 3% on gold. In addition a cess of 15% or other rates on top of 28% GST applies on few items like aerated drinks, luxury cars and tobacco products.

Touted by the government to be India's biggest tax reform in 70 years of independence, the Goods and Services Tax (GST) was finally launched on the midnight of 30 June 2017, though the process of forming the bill took 17 years (since 2000 when it was first proposed). The launch was marked by a historic midnight (30 June - 1 July 2017) session of both the houses of parliament convened at the Central Hall of the Parliament, but which was immediately boycotted by the opposition by staging a walk out to show their disapproval of the same.

Experts have enlisted the benefits of GST as under:

- It would introduce two-tiered One-Country-One-Tax regime.
- It would subsume all indirect taxes at the center and the state level.
- It would not only widen the tax regime by covering goods and services but also make it transparent.
- It would free the manufacturing sector from cascading effect of taxes, thus by improve the cost-competitiveness of goods and services.
- It would bring down the prices of goods and services and thus by, increase consumption.
- It would create business-friendly environment, thus by increase tax-GDP ratio.
- It would enhance the ease of doing business in India.

Why no to GST?

However, the question is: is the picture as rosy as it is portrayed? Wall Street firm Goldman Sachs, in a note 'India: Q and A on GST — Growth Impact Could Be Muted', has put out estimates that show that the Modi Government's model for the Goods and Services Tax (GST) will not raise growth, will push up consumer prices inflation and may not result in increased tax revenue collections.

There appears to be certain loopholes in the proposed GST tax regime which may be detrimental in delivering the desired results.

They are:

India has adopted dual GST instead of national GST. It has made the entire structure of GST fairly complicated in India. The centre will have to coordinate with 29 states and 7 union territories to implement such tax regime. Such regime is likely to create economic as well as political issues. The states are likely to lose the say in determining rates once GST is implemented. The sharing of revenues between the states and the centre is still a matter of contention with no consensus arrived regarding revenue neutral rate.

Chief Economic Advisor Arvind Subramanian on 4 December 2015 suggested GST rates of 12% for concessional goods, 17-18% for standard goods and 40% for luxury goods which is much higher than the present maximum service tax rate of 14%. Such initiative is likely to push inflation.

Communication is considered to be necessity and one cannot do without communication. In modern times, communication has assumed the dimension of telecommunication.

The proposed GST regime appears to be unfavorable for telecommunication sector as well

"One of the major drawbacks of the GST regime could be the direct spike in the service tax rate from 14% to 20-22%" (GST: Impact on the Telecommunications Sector in India). The proposed GST appears to be silent on whether telecommunication can be considered under the category of goods or services. The entire issue of telecommunication sector assumes a serious proportion when India's rural tele density is not even 50%.

The proposed GST regime intends to keep petroleum products, electricity, real estate and liquor for human consumption out of the purview of GST.

It is a well-known fact that petroleum products have been a major contributor to inflation in India. Inflation in India depends on how the government intends to include petroleum products under GST in future.

Electricity is essential for the growth and development of India. If electricity is included under standard or luxury goods in future then it would badly affect the development of India. It is said that GST would impact negatively on the real estate market. It would add up to 8% to the cost of new homes and reduce demand by about 12%.

Conclusion

The proposed GST regime is a half-hearted attempt to rationalize indirect tax structure. More than 150 countries have implemented GST. The government of India should study the GST regime set up by various countries and also their fallouts before implementing it. At the same time, the government should make an attempt to insulate the vast poor population of India against the likely inflation due to implementation of GST. No doubt, GST will simplify existing indirect tax system and will help to remove inefficiencies created by the existing current heterogeneous taxation system only if there is a clear consensus over issues of threshold limit, revenue rate, and inclusion of petroleum products, electricity, liquor and real estate. Until the consensus is reached, the government should resist from implementing such regime.
