### ABSTRACT

To understand Brain computing as regard information s , learning and memory , we have to understand Basic Building Blocks of the universe ( Fig- 1) ( mass – B.B.B Bit or B-Bit ) and Information s ( Code PcPs ) and Divine Mechanics Unit ( CCP , Code PcPs and CP ).

### Introduction [7]

( Fig 1 – Divine Mechanics Unit – CCP, CP and information s – Code PcPs with B-Bit – Mass)

Atomic genetics is the branch of science where we investigate about fundamental interactions of the universe i.e. atomic transcription and translations . New words have been coined to understand hidden science of mind part of reality. Mind reality has been recognized as different faces by “I” about 5000 years back to Arjuna in Mahabharata.( Fig 1) It is just like to understand any language through Alphabets. These are ( different faces ) Alphabets of mind reality. One Mind reality has one face identity and the second mind reality has second face identity and so on. The facial expression represents phenomenon of intelligence and different faces represent different types of properties carrying property. The open eyes means property is activated while close eye means property is inactivated. In spite of carrying properties consciousness they also know how to conduct not only origin of universe but also how to create two different universe i.e. next creation could be different from this creation . In all, it is automatic system of the universe . The mind realities which are of good properties have devtas face identity ( first five faces on both side ) and those mind realities which are of bad properties have demons face identity ( last four faces on both side ) . These are named as code PCPs or messenger atomic genes . The central face is CCP or Thought script where all thoughts of the universe are banked . It is bank of data of all information s of the universe It is face identity of Anti mind particles as data of all information's of the universe are stored as anti mind particles . It is the Time mind ness ( biological clock ) that keeps on expressing different thoughts from this thought script (CCP) . There are four more faces ( black bodies ) shown on extreme left and right floating in fire are CPs ( translating Atomic genes) . That translates the messages and realizes it and reacts accordingly.

Messages From Biological world to understand B.B.B world ( Fig 2) [7]

(Fig-2)

### Structure-

The standard model not only modified rather it has been completed [5] with introduction of energized gravitons , primary fermions, primary bosons , Basic Building Blocks , Mind and Tachyons . ( Fig 3)

( Fig 3 standard Model chart [5] )

( one creation and destruction cycle )

**Message system of the Universe**

Before the origin of the universe nature had only one type of message systems which is called **FIRST TRANSCRIPTION**. Messages ( Code PcPs ) used to go from one B.B.B. to another B.B.B. by atomic transcription. Messages were carried by atomic genes ( Code PcPs ) with very very high velocity. It is the fundamental message system.

After the origin of the universe, nature created atoms. It also created one more message system called **SECOND TRANSCRIPTION**. Here the message (code PcPs) are carried by photons from one atom to another atom with velocity of light. Thus atoms ,molecules, cells, and even individuals talk with one another

After the formation of the cell , nature created one more system called **THIRD TRANSCRIPTION** .Here there is a message storage system formed by DNA. There are messenger molecules called mRNA that carry message from DNA script to cytoplasm where the message (code PCPs) is read or translated by ribosome and they work accordingly. Thus the messages reach to enzymes and hormones and finally messages reach to target units. Having received the messages, target units work accordingly. Finally life effects (metabolic) are observed. These three types of message systems are working in the nature. These message system are being used by the nature according to nature's need. ( Fig-4)

(Fig-4)

**How does nature work & triggering of normal & abnormal effects ( Fig-5 and 6)**

To understand creation physics we have to see Fig- 5 and Fig -6. There are two types of thought stimulation . One is **CONDITIONED THOUGHT STIMULATION** and other one is **UNCONDITIONED THOUGHT STIMULATION**.

**STIMULATION OF THOUGHT EXPRESSION --- There are two types of thought expressions one is CONDITIONED STIMULATION** of thought expression, and other one is **self stimulation of thoughts i.e. UNCONDITIONED STIMULATION** of thought expression .

At the time of the origin of the universe, all effects got created. The cause of all effects of the universe is **THOUGHT** expression. These thought expressions were triggered by **UNCONDITIONED OR SELF STIMULATED WAY** . It is the first step and it is followed by **PROGRAMMING** or formation of programmed messages by code PCPs. This programmed message moves from higher centers to target B.B.Bs. it is called **INTERACTION**. Having received the messages, the mind and mass of the target B.B.Bs. work in a synchronized way so as to produced the effects as thought by a the higher center. If the thought expression by higher center is normal, the shapes, properties and laws produced by target B.B.Bs. would be normal and if the thought expressions are abnormal, the shapes, properties and laws would be abnormal. This is the basic concept of transmutation phenomenon. Finally what we observe is called **EFFECT**. Appearance of new shapes, properties and laws is called **TRANSMUTATION**. The first three steps are collectively called **CCP**. During transmutation process if **CCP** is written, it does mean that unless the thought, programming and interaction take place, nature cannot transmutate. Transmutation phenomenon is seen in particles, atoms, molecules and even in cells. The basic steps of any transmutation remain the same except that the thought expressions differ.

The subatomic particle are made up of more fundamental particles called Basic Building Blocks ( B.B.Bs) which are made up of mind and mass. These B.B.Bs are divine in nature with the result they talk with each other by phenomenon called atomic transcription and translation ( thought expressions). The triggering of broken symmetry is caused by atomic transcriptions. Unless the atomic transcriptions occur, subatomic particles could never exhibit phenomenon of broken symmetry . So the broken symmetry is never spontaneous. It is being mis understood that sub atomic particles do have spontaneous activities as far as broken symmetry is concerned. Hence the Nobel prize physics 2008 awarded to this work is too early to give prize.

(Fig-5)

(Fig 6)

**Message network of the Universe ( Feed Back Mechanism and different centers of the Universe )**

With the origin of universe, nature first created primary units i.e. primary fermions (gravitation) and primary boson, these primary units are equipped with one higher center (one B.B.B.) and rest of the B.B.Bs. are working as lower centers or target B.B.Bs. After primary units ,nature created secondary units i.e. secondary fermions and secondary bosons. similarly nature created tertiary units (lep-to-quarks) and then quaternary units (protons& neutrons). Each unit is equipped with higher centers, lower centers and target B.B.Bs. After quaternary units nature created atomic units, molecular units, complex molecules of life units, organelle units, cell units, tissue units, organ units, system units and individual units. Each unit is equipped with higher centers, lower centers, and target B.B.Bs. Similarly nature created satellite units, planet units, solar system units, galaxy units, super galaxy units, dark matter layer unit. These units are also equipped with higher centers, lower centers and target B.B.Bs. Thus our universe is divided into different units and each unit is equipped with higher and lower centers. All higher centers are under control of highest center of the universe by efferent paths. This efferent path is made up of first transcription. Higher centers can send messages to highest center of the universe by afferent path or feed back path. Thus highest center of the universe is well informed about all effects of the universe. Messages can come from lower centers to higher centers from higher centers to highest center of the universe via afferent path. The highest center of the universe can send messages to higher centers and from higher center to lower centers. There is an inter unit message network also which is made up of first, second and third transcription depending upon the nature's need. Thus the entire universe is under control of highest center of the universe. Highest center can change any programming programmed by it during pre creation era.

See (Figure.7)

(Fig-7)

**What is Brain?**

Anatomy – It is made up of Neurons ( The anatomical and functional unit ) and neurons are grouped to form centers ( areas in the Lobes ) ( Fig 8 ). The functions of the centers are divided and it is called division of labor in neurons .

( Fig -28– Different centers and their Different Functions )

**What is neuron ? –**

It is structural and functional unit of Brain. It has got three structure , 1. Dendrites 2. Body and 3. Axon ( Fig 9 ) .

( Fig 9 )

The two neurons are attached with a system called Synapses ( junction between axon terminal –pre synaptic neuron with dendrites of 2<sup>nd</sup> neuron – postsynaptic neuron ). ( Fig 10) The messages or information s Code PcPs are carried by Chemicals across the Synapses . Messages Code PcPs reach synapses through action potential ( Photon ) of pre synaptic neuron . Further chemicals triggers action potential in postsynaptic neuron . That is how messages ( Code PcPs ) move with carriers photon in axon and chemical in synapses .

( Fig 10- Synapses - )

What are information s? [7] ( Fig 10.1)

( Fig 1`0.1)

They are Code PcPs . They are either produced inborn ( at the time of Birth ) i.e **unconditioned information s** like sucking information s ( Code PcPs Sucking ) that triggers sucking of Milk by baby . Or they are produced from outside - acquired - **conditioned information s** like learning language ( Code PcPs language ) by baby when it grows . ( Fig 11 )

( Fig 11 different informations Code PcPs both ( Conditioned ) and ( unconditioned))

How are information s ( Code PcPs ) created ?[7]

They are created by phenomenon of Atomic Transcription and Translation on Yang B.B.B . As Prayer message formation in brain. ( Fig 12)

( Fig 12 Prayer message formation in brain )

In atomic transcription and translation of prayer , following steps take place on Yang B.B.B - B-Bit ( Figure 12) .

- 1.CP removes RM ( repressor mindness-green ) from OM ( operating mindness -orange ) thus induction of atomic transcription triggers.
- 2.OM triggers activation of free mind particles ( black -inactivated code PCPs ) of that thought script (magenta) of “o god help me” .
- 3.Free mind particles ( black -inactivated code PCPs ) get attached to anti mind particles script ( magenta one ) to form messenger thought script of “o god help me” .
- 4.Messenger atomic genes ( black ) get activated by anti mind particles thought script and further they get detached from anti mind particles thought script to form activated messenger

atomic genes ( activated code PCPs) ( magenta ) of “ o god help me ”

5.CP carries phenomenon of splicing by translating the messenger activated atomic genes ( activated code PcPs ) and finally there is activated message of “ o god help me ” is formed .

6.CP represses atomic transcription by adding RM ( green ) to OM ( orange ) . Thus atomic transcription gets halt.

Having formed the message it comes out in three forms .

In atomic genetic engineering ( Figure 13 ) we use our basic power i.e. power of B.B.Bs. Our B.B.B. (higher center) talks with highest center of the universe by sending the message by first transcription. Till today nobody knows how does the brain generate thoughts. I am going to tell you that mystery too. In the frontal lobe the neurons are responsible for thought generation. In the neuron there is electrical activity called pacemaker activity which is occurring between dendrites and the body of the neuron. The membrane of the cell is made up of atoms and atom is made up of B.B.Bs. At the level of B.B.B. say thought of ‘O GOD HELP ME’ is expressed. As a result programmed messages of O GOD HELP ME (code PCPs) are formed. Out of three programmed messages, one is carried by atomic genes to highest center of the universe. It is called **THOUGHT RAY ( Quantum entanglement )** which is made up of pure atomic genes and then the message goes through phenomenon called first transcription. They come out from brain directly. The other two messages are carried by photons from nucleus of atom to electrons. Here they are modulated on electrical activity of the cell called pacemaker activity. Further they are modulated on actions potentials going towards **REALIZING CENTER** situated in brain stem (RAS) and from **RAS** to speech area situated in the frontal area. Target B.B.Bs. of the realizing center finally realizes thought effect of O GOD HELP ME. While from speech area message goes to motor cortex again via RAS and from there to vocal cords and finally it comes out as a speech effect of O GOD HELP ME. In layman’s terminology formation of the thought ray means PRAYER. ( Fig 14 )

**Where Does Prayer Message go ? ( Fig 15)**

Prayer message goes ( Figure 15) to highest center of the universe via first transcription where it is realized and it is accepted, the highest center sends two messages to B.B.Bs working as higher center in cancer cell. These messages are message of inhibition of abnormal thought expression and message of activation of normal thought expression. Having received the messages, higher center stops expressing the abnormal thoughts and it starts expressing the normal thoughts. As a result, there are no more abnormal programmed messages and in place of that normal programmed messages are there. Now the messages have shifted from abnormal (5 and 6) to normal (2 and 3). This shifting of thought expression is called **ATOMIC GENETIC ENGINEERING ( figure 14 )**

The changed messages reach to target B.B.Bs. through same route. Having received the changed messages, target B.B.Bs. stop expressing the previous programming and they start expressing the normal programming. As a result the cancer cells transmutate into normal cells. **Or diseased cell gets cured. (Fig 14)**

( Fig 13 Prayer message formation – Code PCPs – O God Help Me )

( Fig 14 Atomic Genetic Engineering )

(Fig 15 - Message Net Work of the Universe )

**How these information s ( Code PcPs --Conditioned and un-conditioned )are carried ?**

See messages system of the universe . ( Fig 5 ) . The ( Code PcPs ) are carried as such ( First Transcription ) ( Quantum entanglement ) . For example – prayer messages . They ( Code PcPs ) are carried by photons in second transcription by velocity of light . example color information s , our mobile informations , T.V. informations etc . The ( ( Code PcPs ) are carried by molecules . For Example smell information s , Taste information s . Biological informations ( Code PcPs ) are carried by mRNAs from nucleus to cytoplasm. They are further shifted to enzymes and molecules during polypeptide chains formation in protein synthesis . Thus growth , metabolism , reproduction and cellular respirations are carried . Inner Brain informations ( Code PcPs ) and Heart informations ( Code PcPs ) are carried by electrical properties of brain i.e pacemaker ( EEG) and Action potentials and cardiac electrical properties of systole and diastole ( EKG ) . ( Fig -15.1)

( Fig 15.1)

**How informations ( Code PcPs ) are realised and where ?**

Outer informations ( Code PcPs Taste, smell , sound , color , pain ,touch , temperature etc ) are carried to their centers in brain after they are received by receptors by phenomenon of transduction . Receptors work as transducer. From respected centers they are relayed to realization center in RS ( reticular system ) where at the level B.B.B, there is phenomenon of translation by our CP and we say that we have realized that sensation or information or messages. ( fig 15.2)

(Schematic representation of conversion of pathways from the spinal afferent system and from cerebral cortex on the reticular activating system (RAS different messages are realized here )

**Learning and Memory and information s ( Code PcPs ) Net work in Brain**

At all steps , these are B.B.Bs ( B-Bit ) that are responsible for information's control and triggering . If CCP is written it means unless atomic transcription and translation occur , brain cannot have learning and memory triggering and control and it is called

Divine mechanics of Biology and it is life . These are higher thought expressions of B.B.Bs . In Bits of classical computers and qubits of QC , the thought expressions are lower and different but the mechanics ( DIVINE ) remains the same. ( Fig 16)

( Fig 16 – Divine Mechanics of Brain Computing System – Learning and memory )

**( Fig 17- The Theory of Computers and Brain are same – DI-VINE MECHANICS**

( Structural and Functional smallest Bit ( mass ) is B-Bit of the universe and the Divine Mechanical Unit is CCP , Code PcPs and CP.)

DIVINE MECHANICS The Theory of Computers and Brain is SAME ( Fig 17)

Physics dictates the lowest limits of the size of chips [17]. But divine mechanics doesnot . Hence the **bit is a typical unit of information**. ((Classical and Quantum Bit ) is wrong and to describe informations by adding qubit is also illusion **as in complicate system ,it is the different thoughts expressions that describe informations** . Informations are separate ( Code PcPs ) and bits ( Electron of transistor ) qubits ( electron of diamond crystal ) are separate. At DNA level the bit is nucleotide ( A,T,C,G ) and at Atomic level the bit is photon and electron , at particle level ( secondary fermions and secondary bosons ) the bit is primary fermions and primary bosons and informations are still code PcPs and at B.B.B level the bit is B.B.B ( Yang mass and Yin mass - B- bit ) it self and the information is carried by Code PcPs but at all level of all bit units the information storage system is CCP ( Physiological arrow of Time ) it never dies even after destruction of the universe. Hence information s are eternal .

In computers, Bit is a structural configuration that describes information s of the system and information s are in form of Code PcPs. The working of the bit is triggered and controlled by thoughts of higher centers that form that bit. If the bit is classi-

cal ( transistors of chips ) the effect is different . But if the bit is qubit with entanglement the working is triggered and controlled by thoughts of higher center that form that crystal . In both the effect of describing informations would be different . One is classical ( thought expressions are fixed and limited ) and other one is quantum ( thought expressions are changing and more wide to describe the more wide complicated system to have fast results . ) . In life sciences in Brain the bit is again Photon and the informations are Code PcPs and they are triggered and controlled by CCP of higher centers that is triggered by DIVINE MECHANICS .

In life sciences the CCP ( cryptography ) of B-bit expresses informations ( Code PcPs ) which were not fed like speaking Lie and unlike Bit of classical computer and qubit of QC it shows phenomenon of forgetfulness and IQ phenomenon ( mental age /real age ) . It is Higher functions of B.B.B or B Bit and it is life . Hence there is difference in some aspect of DIVINE MECHANICS \of Computers computation and Brain computation

**What are languages of Number systems ? And How do they work in Computers ?**

( Fig 17.1 Languages of Number Systems and Their Alphabets Systems . Alphabets are Code PcPs )

The four languages ( Decimal, Binary , Octal and Hexadecimal ) of number systems have four types of alphabet systems. These are Base 10 (0-9) , Base 2 (0,1) , Base 8 (0-7) and Base 16 (0-9, A-F) . Alphabets are Code PcPs ( 0,1 2,3,4,5,6,7,8,9. A,B,C,D,E,F ) . ( Fig 17.1)

These languages of number systems have evolved with time and they have come from numerical mindness of CCP of human brain . These are different numerical informations in form Code PcPs by participatory science. The decimal system is used by our CCP while binary system is used by computer's CCP as computer registers 1 and 0 alphabets only. Computer CCP knows that  $00011 * 00101 = 01101$  (  $3*5=15$  ) . The rest two octal and hexadecimal are binary short hand means they are used in place of binary and they represent group of binary numbers . During computation, it is CCP that calculates both in computer and in human brain . There is nothing like artificial intelligence in universe . In computer a soft ware ( learning of computer) is required to convert the binary calculations into decimal results . In brain both calculations are done by our CCP .

On screen we Wright enter 3 Enter multiply enter 5 ( Fig 17.2)

$00011 * 00101 = 01101$  ( this calculation is done by CCP of computer as soon as we enter informations and it is converted into decimal system i.e.15. )

Result is 15 on screen

**Fig 17.2 –Divine Mechanics of Working of Computer computation**

( CCP the thought script is the data bank of coded language in form of anti mind particles of all informations of the universe . Informations are decoded in form of Code PcPs ( numerical mindness ) during calculation both classical and QC by atomic transcription and translation .)

**Atomic genetics and sound phenomenon Divine Mechanics of Life Sciences [9] ( Fig 18 – fig 27)**

( Figure 18 – surface of brain and speech area )

**PATH FROM SPEECH AREA TO VOCAL CORDS**

Speech area in frontal lobe ( figure 18) --- to RS --- arousal phenomenon ---motor cortex nuclei ( vocal cord , muscle of tongue , Lips ) --- cortico- pontine tract ( 7<sup>th</sup> cranial nerve for facial muscle ) and cortico medulary tact ( 10<sup>th</sup> cranial nerve and 12<sup>th</sup> cranial nerve – for tongue muscles ) . From 10<sup>th</sup> cranial nerve nucleus – nucleus ambiguus – 10<sup>th</sup> nerve – recurrent laryngeal nerve --- muscles of larynx ( vocal cords vibration)--- sound effect

( Figure 19 – Generation of sound mindness ( Code PcPs ) on Yang B.B.B and carried by photon )

( Figure 20 - Photon carrying sound mindness ( Code PcPs ) from speech area to vocal cord )

( Figure 21 – propagation of sound photos in media –air )

( Figure 22 – sound photons being received by ear ) ACOUSTIC NERVE Understanding the Ear

- Outer Ear: The outside of the ear, plus the ear canal up to the eardrum or tympanic membrane.
- Middle Ear: The cavity behind the tympanic membrane which houses three small bones that help conduct sound waves to the inner ear.
- Inner Ear: The cavity behind the middle ear houses a series of channels known as the labyrinth, and a snail-shaped structure called the cochlea. The labyrinth is integral to the human balance system. The cochlea contains the thousands of nerves responsible for sensing sound and transmitting it to the brain for processing.
- Auditory Nerve: The eighth cranial nerve, which is the pathway of sound from the ear to the brain.

( Figure 23- journey of sound photons and sound mindness ( Code PcPs ) in side ear )

The vestibulocochlear nerve consists mostly of bipolar neurons and splits into two large divisions: the cochlear nerve and the vestibular nerve.

The cochlear nerve travels away from the cochlea of the inner ear where it starts as the spiral ganglia. Processes from the organ of Corti conduct afferent transmission to the spiral ganglia. It is the inner hair cells of the organ of Corti that are responsible for activation of afferent receptors in response to pressure waves reaching the basilar membrane through the transduction of sound. The exact mechanism by which sound is transmitted by the neurons of the cochlear nerve is uncertain; the two competing theories are place theory and temporal theory.

The vestibular nerve travels from the vestibular system of the inner ear. The vestibular ganglion houses the cell bodies of the bipolar neurons and extends processes to five sensory organs. Three of these are the cristae located in the ampullae of the semicircular canals. Hair cells of the cristae activate afferent receptors in response to rotational acceleration. The other two sensory organs supplied by the vestibular neurons are the maculae of the saccule and utricle. Hair cells of the maculae activate afferent receptors in response to linear acceleration.

Sound waves enter the outer ear (pinna) and travel through a narrow tube (ear canal) that leads inside the ear to the eardrum (tympanic membrane). The eardrum vibrates from the incoming sound waves and transmits these vibrations through three tiny bones called the ossicles (the malleus, incus, and stapes) in the middle ear. They amplify the sound and send it through the entrance to the inner ear (oval window) and into the fluid-filled hearing organ (cochlea).

The vibrations create ripples in the fluid that bend projections from tiny hair cells in the cochlea, causing electrical impulses that the auditory nerve, or eighth cranial nerve, sends to the brain.

The brain translates these impulses into what we experience as sound.

**PATH OF EIGHTH CRANIAL NERVE ( FROM COCHLEA TO HEARING CENTER IN TEMPORAL LOBE ( PERCEPTION PHASE -1)**

( Figure 24 – Journey of sound mindness ( Code PcPs ) from organ of corti to temporal lobe by action potential )

The **organ of Corti** (or **spiral organ**) is the organ in the inner ear found only in mammals that contains auditory sensory cells, or “hair cells.”<sup>[1]</sup>

The organ was named after the Italian anatomist Marquis Alfonso Giacomo Gaspare Corti (1822–1876), who conducted microscopic research of the mammalian auditory system.

**[edit] Structure and function**  
**See also: Stereocilia (inner ear)**

The organ of Corti has highly specialized structures that respond to fluid-borne vibrations in the cochlea with a shearing vector in the hairs of some cochlear hair cells. It contains between 15,000-20,000 auditory nerve receptors. Each receptor has its own hair cell. The shear on the hairs opens non-selective transduction ion channels that are permeable to potassium and calcium, leading to hair cell plasma membrane depolarization, activation of voltage-dependent calcium channels at the synaptic basolateral pole of the cells which triggers vesicle exocytosis and liberation of glutamate neurotransmitter to the synaptic cleft and electrical signaling to the auditory cortex via spiral ganglion neurons. The pinna and middle ear act as mechanical transformers and amplifiers, so that by the time sound waves reach the organ of Corti, their pressure amplitude is 22 times that of the air impinging on the pinna. The organ of Corti can be damaged by excessive sound levels, leading to noise-induced health effects. **The organ of Corti is the structure that transduces pressure waves to action potentials.** The organ of Corti sits inside the cochlear duct, between the scala vestibuli and the scala tympani. The basilar membrane on the scala tympani presses against the hair cells of the organ as perilymphatic pressure waves pass.

**REALISATION PHASE ( 2 PHASE ) ( FROM TEMPORAL LOBE TO RAS )**

**Reticular Activating System ( CONTROL LOOP )**

(Schematic representation of conversion of pathways from the spinal afferent system and from cerebral cortex on the reticular activating system (RAS different messages are realized here )

( Figure 25 – journey of sound mindness ( Code PcPs ) from temporal lobe to RS )

**propagating action potentials**

(Figure 26 -A signal propagating down an axon to the cell body and dendrites of the next cell)

( Figure 27 – journey of sound mindness ( Code PcPs Sound ) inside RS where it reaches final destination on Yang B.B.B where I realizes sound effect of O GOD HELP ME )

**JOURNEY OF ACTIVATED SOUND MINDNESS ( Code PcPs ) IS FROM YANG B.B.B ( SPEECH AREA)OF PRODUCER TO YANG B.B.B ( RETICULAR SYSTEM) OF RECIEVER**

**Conclusion**

**What are Computers ?** – According to Physicist - **The bit is a typical unit of information. Just as a bit is the basic unit of information in a classical computer, a qubit is the basic unit of information in a quantum computer** ((Classical bit and Quantum Bit or qubit ). It all illusion and Myth [18]. To take work with computers you have to activate numerical mindness ( Code PcPs ) and for that you have to program the Bits ( Classical bits and Qubits ) by installing software. It is called learning in computer world . The learning in life sciences world is different but the mechanics is same that you have to put informations through receptors in brain computing system which is CCP.

To understand Brain computing as regard information s , learning and memory , we have to understand Basic Building Blocks of the universe ( Fig- 1) ( mass – B.B.B Bit or **B-Bit** ) and Information s ( Code PcPs ) and Divine Mechanics Unit ( CCP , Code PcPs and CP ). Physics dictates the lowest limits of the size of chips [17]. But divine mechanics doesnot . Hence the **The bit is a typical unit of information.** ((Classical and Quantum Bit ) is wrong and to describe informations by adding qubit is also illusion **as in complicate system ,it is the different thoughts expressions that describe informations** . Informations are separate ( Code PcPs ) and bits ( Electron of transistor ) qubits ( electron of diamond crystal with defect ) are separate. At DNA level the bit is nucleotide ( A,T,C,G ) and at Atomic level the bit is again photon and electron and at particle level ( secondary fermions and secondary bosons ) the bit is primary fermions and primary bosons and informations are still Code PcPs and at B.B.B level the bit is B.B.B ( Yang mass and Yin mass – B-Bit ) it self and the information is carried by Code PcPs but at all level of all bit units the information storage system is CCP ( Physiological arrow of Time ) it never dies even after destruction of the universe. Hence information s are eternal .
