### ABSTRACT

**Background:** Sebaceous cysts are common benign lesions that can occur on various parts of the body, including the scrotum. Multiple cysts in this sensitive area can cause discomfort and cosmetic concerns

### KEYWORDS

#### CASE PRESENTATION

We report a case of multiple sebaceous cysts over the scrotum in a 22-year-old male. The patient underwent surgical excision of the cysts with Z-plasty closure to minimize scarring and promote optimal healing.

#### RESULTS

The post-operative course was uneventful, with significant improvement in symptoms and cosmetic appearance. Histopathological examination confirmed the diagnosis of sebaceous cysts.

#### CONCLUSION

Surgical excision with Z-plasty closure is an effective treatment option for multiple sebaceous cysts over the scrotum, offering excellent cosmetic and functional outcomes.
