KEYWORDS

Clothing is one of the basic need of human life this basic and most important need is satisfied from the early days of civilization by the handloom industry which is one of the oldest cottage industry spread all over the country. Handloom industry used to play a significant role in the rural economy of the Barak valley. It was not just another way of earning livelihood rather it could also earn fame by its products outside the country. Irrespective of the category and place of weaving, the weavers produce varieties of products. Irrespective of the policies, projects, and aspirations arising out of various quarters, handloom sector is undergoing changes which are impacting on the livelihoods of the handloom weavers.

Manipuri women's are also greatly involved in this handloom industry in Cachar district. They are artistic and creative which they prove in the field of handloom and handicrafts. They produce various types of product like Inafi (Sari), bed-cover, Manipuri Chador & Manipuri gamocha, Mosquito net, etc. This not only makes them economically independent but also helps their families with their financial contributions.

But now in Cachar the most of the weavers engaged in this traditional art are facing severe livelihood crisis because of adverse Government policies, globalisation and changing socio-economic conditions. In this age of rapid mechanization, handloom sector is passing through difficult days, as it has largely failed to keep pace with the change in market conditions. Despite a number of schemes and programmes run by various government agencies for promoting the sector, production in handloom sector has been continuously declining over the years. Majority of the weavers were ignorant of the existence of any special credit programme for them. The income from traditional handloom are not able to provide an honorable living to the weaver by solely depending upon this occupation in the District resulting in migration to other occupations.

This section of the study presents an overview of handloom in Cachar district based on secondary data. Here in Barak valley this traditional handloom textiles was exists and also quite a good number of peoples were engaged with this industry. In Cachar district the maximum weaver uses country looms. This was the traditional technology. The country looms are owned by individuals and families. In this production system, the weavers are not attained in favour of factory system. The family labour including that of women and child is the main source of production. Thus the quality and the production technology continued for centuries without many changes. In this process the weaver or the craftsman had to concentrate his eye, feet and hand and apply the mind in every minute. Then only he could make a finished good suitable for the market.

For handloom sector, the co-operative system of production is expected to be the best and

least exploitative. According to the guidelines of the Co-operative Act, all weavers attached to

a co-operative society are its owner members and they have legitimate rights over the management of the society and a share on the profits or loss made by the society. The weavers working under the co-operative system of production are supplied with the essential raw materials such as yarn, dyes, chemicals, etc. by the primary weavers' co-operative society

and get the reasonable wage or conversion charge for the amount of labour put in by them on

weaving. Through the society the member weavers are provided with other social security benefits such as medical relief, group insurance facility, old age benefits and assistance for modernisation of loom and the work shed and the like.

The co-operative system of production is undoubtedly beneficial for the weavers and also for the survival of this traditional industry in a District like Cachar. However, it is found that in majority of the cases the co-operatives have failed to serve the interest of poor and illiterate weavers. Most of the co-operative societies are now sick. Due to weakening of co-operative system of production the livelihood of lowly skilled and semi-skilled weavers is at stake

The weavers depending on this age old industry suffer from serious problems with the average earnings far below their needs and most of them live below the poverty line. Handloom industry in Cachar District is having glorious past but questionable present and uncertain future due to lot of internal and external factors that are acting behind this. In view of the above stated reasons the present article is an attempt to identify the reasons for migration. Handloom, being a traditional skill, once the elderly weavers give it up, the skill will be lost forever and it would be impossible to revive it. Thus this article focuses on the comparison between the weavers who migrated to other occupations by leaving weaving out of desperate need for livelihood and subsequent changes in their socio economic condition in comparison with those who are continuing in hand weaving and eking out their livelihood for survival. The main aim of this study is to analyze livelihood opportunities of weavers who are in weaving as a profession and those who are migrated from weaving for survival. This traditional village industries provide a vital means of livelihood to village artisans. In some parts, it has attained the status of a mature industry, and in other parts, it is still an enterprise confined to the needs of the particular home Handloom industry in Cachar District is having glorious past but questionable present and uncertain future due to lot of internal and external factors that are acting behind this. Though it employs a massive number of rural people, the handloom sector is considered a

sunset industry.

Profile of the Handloom Textile in Cachar District

The handloom industry in the Cachar District has a long tradi-
 tion in the socio economic life of the people for supplement-
 ing the family income to a great extent of the society .The La-
 ichamphi, fanek mosquito net etc. produced traditionally by
 the weavers of CacharDistrict.

Conclusion

Thus from the above analysis it is clear that the position of Cachar in respect of handloom production is deteriorating day by day. Traditional village industries provide a vital means of livelihood to village artisans. In some parts, it has attained the status of a mature industry, and in other parts, it is still an enterprise confined to the needs of the particular home. Handloom industry in Cachar District is having glorious past but questionable present and uncertain future due to lot of internal and external factors that are acting behind this. The services of the co-operative societies and production centres also not beeffective in delivery of necessary training and guidance, facilitating modernisationand up gradation of technology and providing marketing support to the weaver. The weaver communities in the District have been pushed down to the lowerStrata of the economic ladder.Many weavers and even the co-operative societies/production centres are ignorant of the international market. The state government needs to encourage weaver to export of handloom products by providing needed financial assistance and proper guidance, facility and channel for foreign trade. It is necessary tomove these impediments so as to enable these organizations to function efficiently and smoothly. Any industry, the world over, requires public policy support. Handloom sector is also notexceptional.
