

## A Study on Pesticide Degradation by Pseudomonasputida

**KEERTHI YEKOJI**

M.sc Micro Biology Research associate JK Agri genetics. Hydera-bad

**ABSTRACT**

Pesticide is a chemical or biological agent which is used to kill or destroy crop damages. Because of using pesticides we are facing some disadvantages like pesticides consists toxins and carcinogen, these causes environmental pollution. Pollutes effects on soil and water and also predominantly effecting the health of human beings. Furthermore we cannot reduce the pesticides usage, so as to protect the crop, it is better to degrade them rather than reduction.

The powerful tool discovered in the recent past was Pseudomonasputida , it was found to degrade pesticides especially chlorophyrifos used frequently in paddy, chilli and cotton fields.

**KEYWORDS**

**Role Of Bacteria In Degradation:**

Microbial degradation of chlorpyrifos results in higher concentration of 3,5,6-trichloro-2-pyridinol, a major metabolite of chlorpyrifos was produced (Robertson et al., 1998). In alkaline soils, chlorpyrifos is hydrolysed readily to 3,5,6-trichloro-2-pyridinol which is further degraded by microbial activity. The Pseudomonas species had a capacity to degrade p-nitro phenol very effectively but could not degrade methyl parathion. Pseudomonas putida was able to degrade both methyl parathion and p-nitro phenol.

**Material and Methods**

**Materials Required:**

1. Soil sample 2. Test tubes 3. Micropipettes and tips 4. Conical flasks 5. Petri plates 6. Beaker 7. Measuring cylinder 8. Spatulas 9. Inoculation loop and L-rod 10. Spirit lamp 11. Aluminium foil 12. No absorbent cotton 13. Electronic weighing balance 14. Laminar Air-Flow chamber 15. Autoclave 16. Centrifuge 17. Eppendroff tubes 18. Distilled water 19. Agarose gel electrophoresis kit 20. PCR 21. PCR eppendroffs 22. Water bath 23. Incubator 24. Colorimeter 25. Cuvettes 26. Tissue paper

**Equipment Required:**

1. Hot air oven
2. Auto clave
3. Laminar air flow
4. Incubator
5. Centrifuge
6. Polymerase chain reaction
7. Agarose gel electrophoresis
8. Colorimeter
9. UV-VIS trans illuminator

**COMPOSITION OF NUTRIENT AGAR MEDIUM:**

**Table : Composition of nutrient agar medium**

| S.no | Ingredients     | Per Liter |
|------|-----------------|-----------|
| 1    | Peptone         | 5 Grams   |
| 2    | Beef Extract    | 3 Grams   |
| 3    | Sodium Chloride | 5 Grams   |
| 4    | Aqar            | 15 Grams  |
| 5    | Distilled Water | 1000 ml   |
| 6    | pH              | 7.0       |

28gms of nutrient agar is dissolved in the 1000ml of distilled water in a conical flask and cover the mouth of the conical flask with the non-absorbent cotton. Autoclaved the conical flask which contains nutrient agar solution and cooled at room temperature and poured into Petri plates.

**COMPOSITION OF NUTRIENT BROTH:**

**Table**

| S.no | Components                     | Volume |
|------|--------------------------------|--------|
| 1    | Peptic digest of animal tissue | 5gms   |
| 2    | Sodium chloride                | 5gms   |
| 3    | Beef Extract                   | 1.5gms |
| 4    | Yeast extract                  | 1.5gms |
| 5    | pH                             | 7.2    |
| 6    | Distilled water                | 1000ml |

13gms of nutrient broth dissolve in 1000ml of distilled water and mix well. Cover the mouth of the conical flask with non-absorbent cotton plug and autoclave the solution.

**Composition of M.S.M medium: (Minimal salt medium)**

**Composition of MSM media-**

|            |   |          |
|------------|---|----------|
| K2HPO4     | - | 0.06gms  |
| KH2PO4     | - | 0.02gms  |
| MgSO4.7H2O | - | 0.008gms |
| NaCl       | - | 0.002gms |
| NH4NO3     | - | 0.06gms  |

**Reagents:**

1. T.E Buffer 2. ST Buffer 3. SN Buffer 4. Lysis Buffer 5. 3M Sodium acetate 6. Isopropanol 7. 70% Ethanol

**COMPOSITION OF T.E BUFFER:**

**Table**

| S.no | Ingredients | Grams per 100ML |
|------|-------------|-----------------|
| 1    | Tris        | 100mM           |
| 2    | EDTA        | 10mM            |

10ml of tris and 2ml of EDTA was dissolved in the 100ml of distilled water, EDTA pH was adjusted to 8 by NaOH and total volume was made up to 100ml.

**COMPOSITION OF ST BUFFER:**

**Table**

| S.no | Ingredients | Grams per liter |
|------|-------------|-----------------|
| 1    | SDS         | 500gms          |
| 2    | Triton X    | 100ml           |

500gms of SDS was dissolved in warm water of 500ml, add 100ml of Triton X solution, final volume was made up to 1000 ml by using distilled water.

**COMPOSITION OF SN BUFFER:**

**Table**

| S.no | Ingredients | Grams per liter |
|------|-------------|-----------------|
| 1    | SDS         | 50gms           |

|   |         |       |
|---|---------|-------|
| 2 | 1M NaCl | 58gms |
|---|---------|-------|

50gms of SDS was dissolved in 100ml of distilled water, to that 58gms of 1M NaCl was added, after completely dissolving the SDS, total volume was made up to 1000ml by using distilled water.

#### COMPOSITION OF LYSIS BUFFER:

Table no

| S.no | Ingredients | Grams per liter |
|------|-------------|-----------------|
| 1    | SDS         | 50gms           |
| 2    | Triton X    | 100gms          |
| 3    | NaCl        | 2 M             |
| 4    | EDTA        | 10 mM           |

#### COMPOSITION OF 1% AGAROSE:

Table no

| S.no | Ingredients      | Grams per liter |
|------|------------------|-----------------|
| 1    | Agarose          | 10gms           |
| 2    | TAE Buffer       | 20ml            |
| 3    | Ethidium Bromide | 125µl           |

10gms of Agarose was dissolved and 20ml of TAE Buffer and made upto 1000ml with distilled water. The contents were heated until clear solution appears, cooled to 40°C, 125µl of Ethidium bromide was added and poured into gelcaste.

#### COMPOSITION OF TANK BUFFER:

Table no

| S.no | Ingredients         | Per liter |
|------|---------------------|-----------|
| 1    | Tris Base           | 242gms    |
| 2    | EDTA                | 0.5M      |
| 3    | Glacial Acetic Acid | 57.1      |

#### COMPOSITION OF GEL LOADING DYE:

Table no

| S.no | Ingredients        | Per liter  |
|------|--------------------|------------|
| 1    | Bromophenol Blue   | 0.25%      |
| 2    | Xylene Cyanol      | 0.25%      |
| 3    | Glucose or Sucrose | 30% or 40% |

#### Serial dilution Technique

The serial dilution is a technique where the number of bacteria present in the soil sample decreases as the dilution rate increases. The purpose of dilution is to obtain pure isolated colonies (Chellapandi and Himanshu, 2008).

#### Procedure

- A series of sterilized test tubes capped with cotton plugs were taken and marked as  $10^{-1}$ ,  $10^{-2}$ ,  $10^{-3}$ ,  $10^{-4}$  up to  $10^{-8}$ .
- 1g of enriched soil sample was inoculated into 10ml of the molecular grade water containing test tube marked as  $10^{-1}$  so that the dilution is brought about by 1:10 ratio (10 fold dilution).
- 1ml of the diluted sample was taken from test tube of 1:10 dilution  $10^{-1}$  and transferred into a test tube containing 9 ml of molecular grade water marked as  $10^{-2}$  so the dilution is now 1:100.
- The dilution were carried upto  $10^{-8}$ .
- For each transfer the dilution increased by 10 fold, that is 1:10, 1:100, 1:1000, 1:10000, 1:100000 and so on. 0.5 ml was taken from the 3 following dilutions ( $10^{-4}$ ,  $10^{-5}$ ,  $10^{-6}$ ) and inoculated into the nutrient agar plates.

#### Gram Staining

Gram staining technique is a differential staining method used to differentiate bacterial species into Gram-positive and Gram-negative on the basis of physical and chemical properties of their cell walls. Gram-negative cells accept the counter stain safranin and appear pink to red in colour whereas Gram-positive cells retain the crystal violet stain and appear blue to purple.

#### Material and Reagents

- 24 hour old culture
- Wash bottle droppers
- Inoculating loops

- Glass slides
- Blotting papers
- Bunsen burner
- Microscope

#### Crystal Violet (Hucker's)

##### Solution A:

- Crystal Violet (90% dye Content) 2gms
- Ethyl Alcohol(95%) 20ml

##### Solution B

- Ammonium Oxalate 0.8gms
- Distilled water 80ml

Dissolve the crystal violet in ethyl alcohol and the ammonium oxalate in distilled water, mix solution A and B.

Grams Iodine = Iodine 1gram + Potassium Iodide 2 grams + Distilled water 300ml

- Ethyl Alcohol (95%)
- Safranin (2.55 solution in 95% ethyl alcohol) 10ml
- Distilled water 100ml

#### Procedure for gram staining

- Isolated bacterial culture was inoculated, prepared a smear and air dried.
- The dry slide was passed through a Bunsen burner flame for 2 to 3 minutes to heat fix the smear.
- The slide was placed on a staining rack and the smear was flooded with primary stain crystal violet for 1 minute.
- After a minute of exposure the dye was washed gently in tap water and dried with a paper towel.
- The smear was then flooded with gram's iodine for 1 minute which serves as a mordant.
- The slide was again rinsed with tap water and drained carefully.
- Then the bacterial smear was subjected to decolorization step for 10 seconds by adding 20 drops of 95% ethanol.
- After the smear is decolorized it was washed in water without any delay and drained carefully.
- The smear was finally treated with few drops of counter stain safranin for 60 seconds, washed with water and blot dried.
- The slide was observed under the microscope (Olympus Inverted Microscope) with 10X objective.
- Later with an oil immersion 100X objective and recorded the results. The biochemical tests and other microbial basis tests may take much more time and the results procured from these process may really create ambiguity. Hence in the present study instead of Bergius manual based biochemical tests, PCR based 16s rRNA amplification was used.

#### EFFECT OF CONCENTRATION ON PESTICIDE DEGRADATION:

##### PERCENTAGE OF DEGRADATION:

| S.NO | CONC. OF PESTICIDE | 1 <sup>ST</sup> HOUR | 2 <sup>ND</sup> HOUR | 3 <sup>RD</sup> HOUR | 4 <sup>TH</sup> HOUR | 5 <sup>TH</sup> HOUR |
|------|--------------------|----------------------|----------------------|----------------------|----------------------|----------------------|
| 1    | 15mg               | 90%                  | 92%                  | 92%                  | 92%                  | 92%                  |
| 2    | 30mg               | 34%                  | 90%                  | 90%                  | 92%                  | 92%                  |
| 3    | 45mg               | 40%                  | 45%                  | 90%                  | 90%                  | 90%                  |
| 4    | 50mg               | 20%                  | 30%                  | 40%                  | 60%                  | 60%                  |
| 5    | 55mg               | 0%                   | 30%                  | 35%                  | 45%                  | 45%                  |

**EFFECT OF CONCERNTRATION ON PESTICIDE DEGRADATION**

Maximum degradation was observed at 15 mg/lit.

**EFFECT OF TEMPERATURE:**

After incubation of bacterium to the growth medium with pesticide in separate conical flask at different temperatures such as 15, 27, 38, 42 degrees of Celsius respectively.

**EFFECT OF TEMPERATURE ON PESTICIDE DEGRADATION: PERCENTAGE OF DEGRADATION:**

| S.NO | TEMPERATURE | 1 <sup>ST</sup> HOUR | 2 <sup>ND</sup> HOUR | 3 <sup>RD</sup> HOUR | 4 <sup>TH</sup> HOUR | 5 <sup>TH</sup> HOUR |
|------|-------------|----------------------|----------------------|----------------------|----------------------|----------------------|
| 1    | 15°c        | 16%                  | 20%                  | 32%                  | 32%                  | 35%                  |
| 2    | 27°c        | 20%                  | 25%                  | 30%                  | 32%                  | 35%                  |
| 3    | 38°c        | 25%                  | 40%                  | 54%                  | 65%                  | 80%                  |
| 4    | 42°c        | 15%                  | 20%                  | 35%                  | 30%                  | 30%                  |

**EFFECT OF TEMPERATURE ON PESTICIDE DEGRADATION**

Maximum degradation was observed at 38°c.

**EFFECT OF pH:**

After incubation of bacterium to the growth medium with pesticides in separate conical flasks at different pH are incubated such as 6.6, 7.5, 8.5 and 9.5. Maximum degradation was observed at pH 7.5.

**EFFECT OF pH ON PESTICIDE DEGRADATION:**

| S.NO | pH   | 1 <sup>ST</sup> HOUR | 2 <sup>ND</sup> HOUR | 3 <sup>RD</sup> HOUR | 4 <sup>TH</sup> HOUR |
|------|------|----------------------|----------------------|----------------------|----------------------|
| 1    | 6.5% | 30%                  | 35%                  | 50%                  | 70%                  |
| 2    | 7.5% | 36%                  | 55%                  | 85%                  | 92%                  |
| 3    | 8.5% | 20%                  | 40%                  | 50%                  | 58%                  |
| 4.   | 9.5% | 18%                  | 25%                  | 40%                  | 55%                  |

Maximum degradation was observed at 7.5 pH.

**EFFECT OF PH ON PESTICIDE DEGRADATION**

**EFFECT OF SUBSTRATE:**

After incubation of bacteria to the growth medium with pesticide in separate conical flasks at different substrates such as glucose, fructose and starch. Maximum degradation was observed at fructose.

**EFFECT OF SUBSTRATE:**

| S.NO | SUSTRATE | 1 <sup>ST</sup> | 2 <sup>ND</sup> | 3 <sup>RD</sup> |
|------|----------|-----------------|-----------------|-----------------|
| 1    | GLUCOSE  | 85%             | 90%             | 90%             |
| 2    | FRUCTOSE | 90%             | 92%             | 93%             |
| 3    | STARCH   | 86%             | 89%             | 89%             |

**EFFECT OF SUBSTRATE ON PESTICIDE DEGRADATION**

Maximum degradation was observed using fructose as a substrate after incubation of culture growth medium.

**RESULT:**

From the above studies it was found that Pseudomonas putida paddy fields of khammam district of Tiruvur village possessed the maximum degradation at the concentration of 15 mg/lit, temperature is 38°c at pH 7.5 by utilizing the Fructose as substrate.
