ABSTRACT

The beg technique is a tool by which the nurse, during her visit will enable her to perform a nursing procedure with ease and deftness, to save time and effort with end view of rendering effective nursing care of client.

Aim- The study aims at to assess the knowledge regarding bag technique among B.Sc nursing IVth year students at selected nursing college in (M.P) with a view to provide questionnaires. Descriptive study used for this research study.

Material and methods- A quantitative research approach, descriptive research design was adopted for the study. Total 30 samples obtain from B.Sc nursing IVth year students at selected college of nursing Indore (M.P) by using Non probability convenient sampling technique was used. The Data was analysed by using the descriptive and inferential statistics.

Major findings of the study- it is found that among B.Sc nursing IVth year students Were 63.33% are belongs to good category and 36.67% belongs to the average category. Statistical analysis showed that overall mean knowledge score (14.7) Thus the study revealed that there is no significant association with the selected socio demographic variables So null hypothesis H0 is retained and alternative hypothesis H1 is rejected .

INTRODUCTION:
The public health bag is designed to carry equipment and material needed during a visit at the home, school or factory. The bag should be made up of canvas, leather or light metal. The bag can be carried by the hand or on the shoulder.

BACKGROUND
The beg technique is a tool by which the nurse, during her visit will enable her to perform a nursing procedure with ease and deftness, to save time and effort with end view of rendering effective nursing care of client.

- OBJECTIVES-**
1. To assess the level of knowledge on bag technique among B.Sc nursing IVth year students
 2. To find out the association of level of knowledge on bag technique among B.Sc nursing IVth year students with their selected socio demographic variables .

Hypothesis- (at p<0.05 LEVEL OF SIGNIFICANCE)

H0- There is no significant association between knowledge score regarding bag technique with their selected socio demographic variables among B.Sc nursing IVth year students.

H1- There will be a significant association between knowledge score regarding bag technique with their selected socio demographic variables among B.Sc nursing IVth year students.

METHODS
In this study descriptive research design was used . The sample consisted of 30 B.Sc nursing IVth year students of selected nursing college ,Indore (M.P). First consent was taken from the BSc nursing IVth year students and socio demographic data (Age, Previous Knowledge, Religion, , Training attained) was collected from the B.Sc nursing IVth year students to assess the knowledge of B.Sc nursing IVth year students mcq. Questionnaires was used .

RESULTS
Section 1: Frequency and percentage distribution of demographic variables.
Among 30 B.Sc nursing students according to their age in year

shows that 10 % each were belonging to the age group of 19 to 20 year, 90 % in age of 21 to 22 year of age respectively. Among 30 B.Sc nursing students according to their previous knowledge shows that 100 % each have knowledge regarding bag technique Among 30 B.Sc nursing students according to their religion shows that 40 % were belonging to the Hindu religion ,were 60% are belong to the Christian religion **Among 30** B.Sc nursing students according to the training attended shows that 63.33% are attained the training and 36.67 % are not attended the training.

Section2: Finding related to knowledge regarding bag technique among B.Sc nursing IVth year students
The present study shows that overall mean (14.7) and standard Deviation (1.54)

The assessment of knowledge of B.Sc nursing IVth year students studying in selected nursing college Indore , the level of knowledge is divide under following headings poor , average , and good. There was 63.33% are belongs to good category and 36.67% belongs to the average category

Section 3: Association between the knowledge of B.Sc nursing IVth year students with selected demographic variables
.There is no association of knowledge score between all four socio demographic variables (age, previous knowledge, religion ,training attended) so we null hypothesis H0: There is no significant association of knowledge score with their selected socio demographic variables is retained and alternative hypothesis H1: There will be significant association of knowledge score with their selected socio demographic variables is rejected.

- NURSING IMPLICATION -**
The findings of the study have implications in various field of nursing, these are
1. Nursing education
 2. Nursing practice
 3. Nursing administration
 4. Nursing research

Nursing education:
Nurse educator should emphasize more on preparing student to impart health information about technology, advancement

in medicine, legal limits and societal changes etc.

More knowledge should be provided to student regarding bag technique

Nursing practice:

There is need to develop education programme for B.Sc. nursing fresher to improve, to improve knowledge regarding bag technique it will be effective promoting and reinforcing positive attitude The students education need to prepare self – learning material such of learning packaging and programme .

Nursing administration:

Nursing profession should be able to render service according to the changing need of the client. The student's administration must equip her latest book, training, campus

Implication for nursing research:

Research should be directed for exploring and updating the student knowledge and ability regarding bag technique Nursing research should be conducted to prepare various educational material for student studying in nursing college.

RECOMMENDATION –

On the basis of the findings of the study the following recommendation are offered for future research

A similar study can be done to evaluate the knowledge along with practice score

A comparative study can be carried out on nursing students regarding bag technique studying in private and Government College.
