ABSTRACT

Immune Thrombocytopenic Purpura (ITP) is an auto immune pathology characterized by a low platelet Count, purpura and hemorrhagic episodes caused by anti-platelet auto-antibodies. It occur when the immune system mistakenly attacks platelets. Annual Incidences of ITP is approximately 42,000 in India. ITP is a blood disorder that affects both children and adult, it is more common in females than Males.

INTRODUCTION

What is ITP?

Immune Thrombocytopenic Purpura (ITP) is a blood disorder characterized by a decrease in the number of platelets in the blood. Platelets are blood cells that help stop bleeding. Low platelet counts can cause easy bruising, bleeding gums and internal bleeding. ITP is caused by an immune reaction against one's platelets in which the immune system mistakenly attacks own platelets and destroys them. So it is called Immune Thrombocytopenic Purpura.

Thrombocytopenia Means low platelet count in the blood.

Purpura refers to the purple discoloration of the skin with a bruise.

Causes Of ITP:-

ITP mostly occurs as a result of antibody production against platelets. In few cases a type of white blood cells called T-Cells attack platelets directly, this immune system error may be a result of any kind of the followings:

What is ITP?

Few Medication Infections Typical viral infections Immune Disorders Low grade lymphomas and leukemias Sometime the cause of ITP is not known

Types of ITP:- two type: 1. Acute 2. Chronic

Acute Thrombocytopenic Purpura

occurance-

This usually affects young Children of age of 2 to 6 Years. The symptoms may appear after viral infection and usually disappear within 6 months, often within a few weeks.

Chronic Thrombocytopenic Purpura

occurance-

Chronic ITP can occur at any age. the symptoms can last more than 6 months, several years or for life time.

Symptoms of ITP:-

- Purpura- Bruise- The purple color of the skin in which blood has leaked under it .
- Nose Bleeding
- Bleeding Gums/ Mouth
- Blood in Vomit, Cough, Urine, or Stool
- Heavy Menstrual Blood Flow
- Bleeding in the Head. This is Most dangers complication of ITP
- homoeopathic Management of ITP with HEMODYNAMIC MEDICINE

Homoeopathic Management Of Itp With Hemodynamic Medicine

Hemodynamic medicines for **ITP** are mainly focused on maintaining the normal level of platelet and thus these

medicines are capable of preventing **ITP** and Its complications.

Hemodynamic Medicines (introduction):-

HEMODYNAMIC or auto-hemo medicine is a powerful tool in the management of **ITP**. These medicines are prepared from the patient's blood, after the dynamic process of Potentization it becomes a very potent instrument to manage **ITP**.

Salient Features Of Hemodynamic Medicines :-

- Powerful Autonosode.
- As per homeopathic low of similimum these medicines are pathologically similimum.
- The HEMODYNAMIC medicines of patient prepared with homoeopathic lows and philosophy, are applicable in treating, Chronic and difficult cases of **ITP**.
- Dynamic method of potentization is used for preparation in Hemodynamic medicines is LM potency Scale. This scale has the power of giving deep penetrating, long and fast acting results without any type of disease or medicinal aggravations.
- These medicines should be taken orally and are given at an interval of minimum 10 days before they manifest there action.

RESULTS OF HEMODYNAMIC MEDICINES IN COMPLICATED CASES OF ITP
